Nick Krzemienski

Agentic Engineer
New York, New York, United States

Summary

12 years shipping software. 8 years inside streaming video. The last 2 years inside agents.I started in mobile and web. In 2016 I moved into OTT video and spent the next eight years on the engineering side of the streaming stack — players, encoding pipelines, just-in-time transcoding, server-side multi-view systems.At fuboTV, the work compounded:• 2016–2018: managed tvOS and Roku as fubo pivoted into Connected Devices. Shipped a shared Swift library for iOS/tvOS that separated UI from player, so linear and VOD surfaces could scale without forking the playback layer.• 2018–2022: Engineering Lead, VOD Encoding and Operations. Brought the VOD pipeline in-house. Shipped dual HEVC + AVC support across the catalog, which freed up CDN flexibility and held quality across every device and network we had to serve.• 2022: Engineering Lead, Video Innovations. Server-side multi-view — the next surface for live sports.• 2023–2024: led the just-in-time transcoding and packaging playout system for HEVC files. Smaller storage footprint, faster catalog turns, the same picture quality at the device.That work meant FFmpeg internals, reading ISO specs at 1 AM, encoder tuning, AWS, Docker, and the kind of operational scar tissue you only earn running pipelines at production scale.Underneath all of it is six years as an Infantry Squad Leader, USMC, rank Sergeant. The mission framing — make the call, own the call, brief the next squad — is what made everything in software make sense after.I left fubo in 2024. I had a hunch about AI agents and I wanted runway to test it.Two years later, that hunch is the work.Today I'm Principal at WithAgents (withagents.dev). I help engineering teams turn AI from a demo into delivery — through harnesses, validation gates, and the rules that scale senior engineering taste across 100 agents instead of one keyboard.Contract capacity is open for the next two or three engagements.Video work + open source → awesome.video Agentic work + open source → withagents.devEvidence or it didn't happen.

Experience

WithAgents

Principal

May 2026 - Present (2 months)

New York, NY

Building the operating model for agentic engineering — turning AI coding from a demo into shippable delivery.

After two years of hands-on work with agents inside real engineering codebases, I left video for this. I've burned through more API spend than most developers I know and recorded scar tissue from every failure mode along the way. WithAgents is where that work lives in public.

What I do here:

• Contract engagements with teams — enterprise or startup — that want to build parts of their stack with agents and want a partner who has already paid the tuition. Capacity open for the next 2–3 engagements.

• A field-journal series, beginning 2026-05-19. One scenario per day from the last two years — real codebases, real failures, real harnesses that solved them.

• Open-source tools as they ship — validation gates, agent harnesses, planning loops, consensus engines. The community gave me the foundation; contributing back is not a roadmap item.

The thesis: every engineer is becoming a manager — not of people, but of agents, rules, and harnesses. The leverage is no longer keystrokes. It's judgment compressed into rules an agent reads before it acts. Your taste, externalized.

What this looks like in production: – harnesses that block test files, mocks, and "it compiled" theater – consensus gates that require ≥2 independent reviewers to PASS a verdict – planning loops with refusal discipline — the agent refuses to ship without cited evidence – skill systems that compress senior engineering taste into invocable behavior

Stack I work in daily: Claude Code, Claude Agent SDK, Next.js, Swift / iOS, TypeScript, Python.

Looking for: teams in the gap between the demo works and we trust this in production.

Evidence or it didn't happen.

fuboTV

7 years 1 month

Engineering Lead, Video Innovations

March 2022 - May 2024 (2 years 3 months)

New York, New York, United States

• Spearheaded the development of server-side multi-view systems in 2022, integrating multiple video feeds within a single player interface, revolutionizing content consumption and enhancing viewer experience.
• Engineered a just-in-time (JIT) transcoding and packaging to HLS solution from 2023 to 2024, optimizing it for HEVC source files. Deployed in Kubernetes (k8s), significantly enhancing system scalability, fault tolerance, and operational efficiency across video streaming operations.
• Ensured high availability and service reliability through meticulous management of containerized applications, dynamically adjusting resources with horizontal pod autoscaling to meet fluctuating demands.
• Implemented persistent volumes and stateful sets for effective data management, pivotal for the success of the JIT transcoding workflow.
• Collaborated with cross-functional teams to gather requirements and design scalable and efficient solutions, ensuring seamless integration with existing systems.
• Conducted thorough testing and debugging of code, identifying and resolving issues promptly to minimize downtime and improve system performance.
• Maintained clear and concise documentation, facilitating ease of understanding and knowledge transfer among team members.
• Stayed updated with the latest technologies and industry trends, continuously enhancing technical skills and knowledge to drive innovation and deliver cutting-edge solutions.

Engineering Lead, VOD Encoding & Operations

November 2018 - March 2022 (3 years 5 months)
New York, NY, United States

• Responsible for the encoding, packaging, and operations surrounding VODs, this system is responsible for approximately 500 hours of delivered assets daily to be first received from a content provider, then transcoded to optimal bitrate ladders, and then finally packaged in both HLS and DASH with DRM protection.
• Leverage AWS Spot Instances and a container based infrastructure to do transcoding and packaging operations at approx 70% less cost than on demand cloud compute
• Engineered multiple codec streaming with DASH(h.264, h.265, vp9) & HLS(h.264, h.265) assets for 4K content
• Enabled multiple codec assets for capable devices for non 4K content if a given device can take advantage of it

• Utilizing playback analytics from players to optimize QoE around VOD playback
• Built and maintain a Server-less CDN Edge to ensure proper playback across all OTT devices based on a given platform’s decoding capability, the device’s current playback screen features / resolutions, andenabled the ability to roll out new codecs as we continuously improve our assets
• Responsible for parsing and validating CableLabs metadata for received assets to be properly ingested into our content graph
• Designed and implemented a live2vod generator to enable DRM protected playback of content from our linear streams in both HLS & Dash based on a schedule of assets leveraging the existing transcoded video chunks.
• Made Accessibility a priority and enabled the generation of sidecar files for packaging from any mpeg2 CE-608 or CE-708 received source content.
• Ensured all key failure points in the pipeline have proper alerting and escalation policies given any unexpected results and to ensure the pipeline is functioning at optimal health

Engineering Manager, Roku & AppleTV
February 2018 - November 2018 (10 months)
New York, New York

• Hired, managed, and mentored a team of 10 software engineers in the NYC office
• Responsible for both fuboTV's AppleTV & Roku teams product roadmap and engineering goals
• Contributed code to both Roku & AppleTV teams as a SWE, while managing
• Designed and implemented workflow automation for both teams with integrations into Jira
• Developed and designed a testing harnesses to run automation suites on an in-house device farm
• Managed and built relationships with both Apple & Roku partner engineering teams
• Helped build and deliver the first ever 4K live feed for OTT, duringWorld Cup 2018

Software Engineer, iOS
May 2017 - February 2018 (10 months)
Greater New York City Area

• Rewrote the fuboTV's Swift player framework from the ground up
• Response for the decreased usage in 3rd party vendors SDKs
• Designed and measured overall video quality experience
• Leveraged all of Apple's AVFrameworks

• Built & designed fuboTV's In App Billing system to allow for customers to subscribe via iTunes and Roku

Koda Labs Inc.
Principal Developer & Founder
October 2013 - May 2017 (3 years 8 months)
New York, NY

• Hired, managed, and mentored a team of 3 developers and various contractors in completing over 15 successful client projects.
• Managed all client projects using agile software methodologies and various project management tools.
• Utilized Apple’s latest iOS APIs and frameworks (like Touch ID and UIKit) to ensure the best user experience on various client's apps.
• Implemented all projects using a MVC architectural pattern ensuring production level code bases.
• Designed, architected and developed numerous custom API's leveraging AWS that communicated to various front ends.
• Integrated WebRTC technologies in numerous apps creating video and text chat capabilities for end users.
• Aided in the marketing of mobile applications for iOS and Android platforms utilizing Facebook Ads and Google Adwords.
• Built & designed 4 different games in Unity3D that had user bases well over 1 million users.

United States Marine Corps
Infantry Squad Leader
December 2008 - January 2015 (6 years 2 months)
2/25 Weapons Co.

• Directly responsible for the actions and well being of Marines under my command.
• Coordinated the movement and employment of various weapons systems within my squad to complete missions and patrols.
• Gained a proficiency for giving and receiving orders under stressful environments as well as maintaining a military bearing at all times.
• Developed leadership while leading my team by adhering to the three core values of Marine Corps; Honor, Courage, and Commitment.
• Reached the rank of Seargent in less than 4 years.

Majestyk Apps
Managing Director & Co-Founder
October 2011 - September 2013 (2 years)

New York, NY

• Lead a team of 4 developers and 2 graphic designers in completing over 20 successful client projects.
• Responsible for executing projects for Disney, Sky Rocket Toys, Wicked Cool Toys, SuiteRetail, Ingk, Simplexo, among numerous other prominent clients.
• Designed and developed complex data flows for a mobile POS system built on Netsuite's cloud.
• Developed a plush toy connected to an iOS & Android app that sold in Toy's R Us.
• Managed a product development process with factories in China ensuring the integration of our client's custom built technology.
• Worked in Sketch to design user interfaces and branding for clients and then translated those designs to functional iOS apps.
• Utilized iBeacon and hardware technologies (e.g. Estemote, etc)
• Used SOAP and JSON based web services to integrate client applications with server backend.

Shodogg
Mobile Developer
December 2011 - September 2012 (10 months)
New York, NY

• Developed innovative properties centering around dynamic delivery of media content from mobile devices to web enabled screens.
• Reverse engineered an iOS application that served as an HTTP server on a LAN.
• Worked with streaming protocols for video such as HLS and byte level data from video codecs such as H. 264
• Created an iOS Framework for other developers to use in their applications.

Argus Information and Advisory Services
Data Ops Intern
February 2011 - November 2011 (10 months)
White Plains, New York

• Imported and mapped financial data with SQL commands
• Worked with a team of developers to benchmark and report financial data.

Mental Health Association of Westchester
Computer Support
January 2007 - March 2008 (1 year 3 months)
Elmsford, NY

• IT administrative support including inventory, & computer deployment.
